

SUNDAES AND SCIENCE

Sundaes and Science attempts to put some “fun” into the functions of experimentation. The female students in grades 5 through 8 have the opportunity to create, question and compare scientific results with their peers in a non-threatening atmosphere. The program maximizes hands-on experimentation by the students. It has the added benefit of engaging the mothers, grandmothers or guardians of the students by exposing them to the material, as well. There is an attempt to show the students that a scientific career can be a desirable result of an interest in science, provided they have the proper educational preparation.
